Abstract:

This study aims to explore the relationship between the variables mentioned in the title. The research is conducted using a quantitative approach, involving data collection from a sample of participants. The findings indicate a significant positive correlation between the variables studied. The results suggest that the independent variable has a strong influence on the dependent variable. The study contributes to the existing literature by providing empirical evidence on this topic. Further research is recommended to explore the underlying mechanisms and to test the findings in different contexts.
