

Table Specifications:

Model	YOQ-E250
Wiremesh Size (mm)	250
Wiremesh Thickness (mm / inch)	3.5-6.5
Refrigeration Capacity	1 ton
(Cooling Capacity (kW))	5
(Cooling Capacity (BTU/hr))	2-15
Weight (kg)	10.94
Dimensions (mm)	840 * 940 * 1780

Installation:

**Enrobing** is a process of applying a protective coating to the surface of a pipe or cable. This process is used to protect the underlying material from environmental factors such as corrosion, abrasion, and chemical damage.

The following steps describe the enrobing process:

1. **Preparation:** Enrobing is performed on a pipe or cable that has been cleaned and dried. The surface must be free of any contaminants that could affect the coating.
2. **Enrobing:** Enrobing is performed by passing the pipe or cable through a bath of molten material. The material is applied to the surface of the pipe or cable in a uniform layer.
3. **Post-Enrobing:** Enrobing is performed using a zigzag pattern to ensure that the coating is applied evenly to the entire surface of the pipe or cable.

The 250mm Enrobing is performed using a 250mm diameter pipe. The Enrobing is performed using a zigzag pattern to ensure that the coating is applied evenly to the entire surface of the pipe. The Enrobing is performed using Omron equipment.

**& amp;** Installation:

1. The Enrobing is performed using a zigzag pattern to ensure that the coating is applied evenly to the entire surface of the pipe or cable.
2. The Enrobing is performed using Omron equipment.

Notes:

The Enrobing is performed using a zigzag pattern to ensure that the coating is applied evenly to the entire surface of the pipe or cable. The Enrobing is performed using Omron equipment.

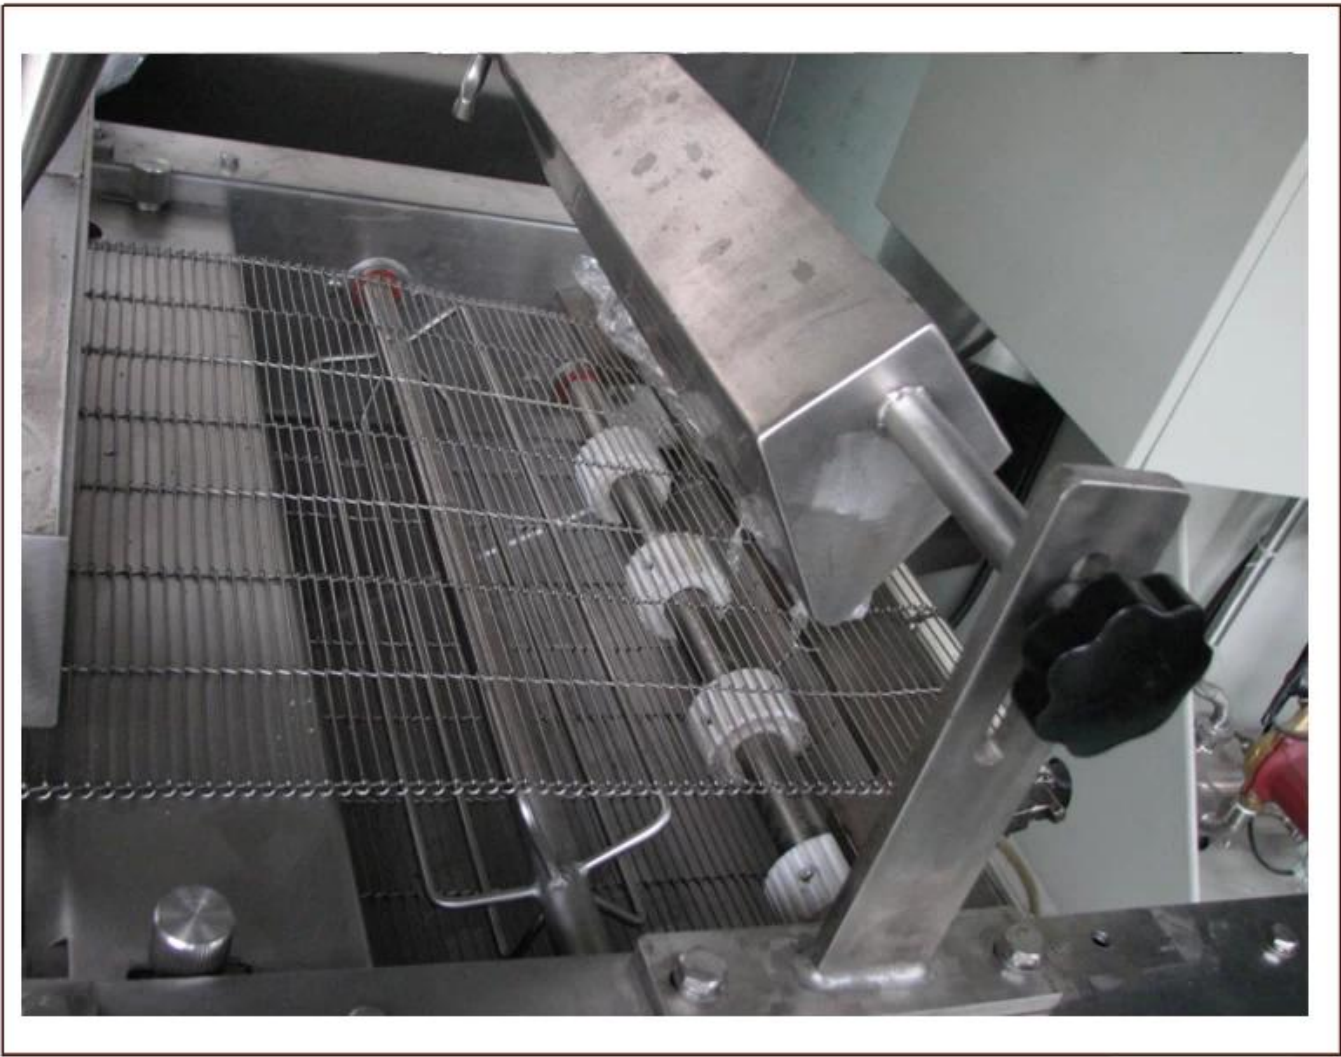

2. The Enrobing is performed using a zigzag pattern to ensure that the coating is applied evenly to the entire surface of the pipe or cable. The Enrobing is performed using Omron equipment.
